	♥ The suction cap must not be too worn down. If the cap shows
	considerable wear, ask your supplier or nursing staff to replace it.
	• Any serious incident that has occurred in relation to the device shall be
	reported to the manufacturer and the competent authority of the Member
	State in which the user and/or the patient is established.
	· · ·
	2. Intended use, indications, contraindications and installation
	Intended use:
I	Walking aids are used for two purposes: as part of a rehabilitation programme
	when the user is recovering from an injury or operation and as a long-term aid
	to mobility when the user has a permanent difficulty with walking.
	These devices help in maintaining balance, aid in the prevention of injuries
	(particularly falls), and allow the person to attend to his/her errands
	independently. Mobility aids can be used indoor or outdoor, depending on the
	model.
	Mobility aids are used to modify the weight redistribution: some of the weight
	carried through the legs when walking is transferred through the arms of the
	frame or stick as it is leant on for support. Products equipped with a seat allow
	short rest to the user.
	Indications
	- Loss of autonomy due to walking disorders - Balance and/or posture disorders
	- Walking problems
	- Rehabilitation programme after an injury or an operation
	Contraindications Don't use in case of:
	- Severe cognitive disorder - Severe loss of balance - Severe motor or
	perception disorders - Weakness in the upper limbs
1	Only specialists can adjust the product and teach you how to use it. A wrong
	use or adjustment could lead to overstress of the device or of the patient.
	The device must be adjusted individually by the technical staff to suit your
I	needs.Ask the technical staff how to use this product and make sure that you
	understood clearly their explanation.
	understood clearly their explanation. In case of doubt, don't hesitate to ask again.
