MARGHERITA FINGERGUARD FOR HYPODERMIC NEEDLES

23798

NO MORE ACCIDENTAL SYRINGE INJURIES

• 23798 MARGHERITA FINGERGUARD

Margherita FingerGuard is a Class I Medical Device that allows the operator to recap and remove the syringe needle in complete safety, eliminating the risk of accidental needle sticks to both healthcare workers and those responsible for the disposal of sharps.

Unique

Internationally patented

Sterilizable

Autoclavable (121°C for 15 minutes or 135°C for 5 minutes)

Ecological

Promotes waste sorting as it enables just the needle to be disposed of in the sharps bin. Raw materials are biocompatible.

Safe

Complete protection against accidental syringe needle sticks.

Economical

Last 4 years, reducing costs by at least 50,000 € per year for a small hospital and over 200,000 € per year for a medium/large hospital.

HOW DOES IT WORK?

THE PROBLEM

There are 960,000 accidental syringe stick injuries every year in Europe. The total cost estimate resulting from syringe needle stick injuries exceeds 1 billion Euros

LEGISLATION

European Directive 2010/32/EU requires Member States to adopt more effective provisions to protect workers from accidental needle stick injuries from syringes.

THE SOLUTION

Margherita allows total safety to operator and to healthcare workers responsible for the disposal of sharps.

Light field adjustment for PENTALED 28

PENTALED

PENTALED is a perfect combination of technological developments, innovation, ergonomics and compact design, ultra-light and handy structure.

Five versions available (trolley, ceiling, ceiling double, trolley with battery group and wall) and technical performances make PENTALED suitable for precision operations, diagnostic use, surgical rooms and small surgeries.

Battery group, with an autonomy of 3 hours, is available on request also for wall and ceiling models.

Cold LED light

Bright and cold light reproduces colours faithfully, assuring excellent definition of details.

Ergonomic

PENTALED can be easily positioned by rotation on 4 axes:

- the dome has a full-circle 360° rotation
- the arm moves vertically thanks to a spring balancing system
- the reflector can be rotated on the vertical and horizontal axis.

Movements are possible through the sterilizable handle.

50,000 hours life time

The low power supply current and the heat dispersion through aluminium dome allow the LED a 50,000 hours lifetime.

Light intensity adjustment

Light intensity adjustable through digital control

The ultra-flat lighting body is equipped with ultra-resistant polycarbonate screen which guarantees protection against accidental collisions.

The dome can be adjusted by the sterilizable handle

AMBU® AURA-i™ LARYNGEAL MASK VENTILATION & INTUBATION

AMBU® AURA-i™ DISPOSABLE LARYNGEAL MASKS

Ambu® Aura-i™ is a disposable laryngeal mask designed for everyday use. Pre-formed to follow the anatomy of the human airway, the soft rounded curve of the Aura-i ensures fast and easy placement and guarantees long-term performance. Aura-i is the preferred everyday routine device for establishing an airway where an ET-tube is deemed unnecessary.

At the same time it holds a place on the difficult airway cart.

In case of a "Cannot Intubate - Cannot mask Ventilate" (CI-CV) situation, where the purpose is to intubate the patient, Aura-i can be used as conduit for direct endotracheal intubation assisted by a flexible scope.

The airway tube is designed to allow easy passage of an appropriately sized ET-tube. The recommended ET-tube size is indicated on the connector block of the mask.

- packaged sterile and ready for use
- colour coded pouch with directions for use
- 5 sizes fitting a wide range of patients.

Direct endotracheal intubation using a flexible scope and standard ET-tubes

Built-in, anatomically correct curve for fast and easy insertion

Navigation marks to guide flexible scope

Intubation capability using standard ET-tubes

Universal 15mm connector (ISO)

Reinforced tip resists folding over during insertion and plugs the upper esophageal sphincter

Smooth sides without ridges or fins that can scratch delicate tissue

Ultra thin pilot balloon identifies mask size and provides precise tactile indication of degree of inflation
