## CUFFED AND UNCUFFED TRACHEOSTOMY TUBES

### CUFFED AND UNCUFFED TRACHEOSTOMY TUBES

Curve tubes designed to rapidly provide an airway within seconds during an emergency by inserting them into a tracheostomy stoma, a hole created in the neck and windpipe. The hollow tube whether with or without cuff, is directly placed into the trachea through a surgical incision, using a wire-guided progressive dilation technique.

- tube is made of medical grade, non-toxic, clear and kink-resistant PVC to protect delicate mucosal tissue
- smooth rounded obturator's tip reduces trauma during insertion
- neck plate with printed size for easy identification
- standard connector

Tube includes: cuff (cuffed only), inflation line, valve, pilot balloon (cuffed only), obturator, neck plate, connector and tube ties. Sterile, single patient. Class IIa. DEHP-free. Made with no natural rubber or latex.

### Cuffed tracheostomy tubes additional features

- high-volume low-pressure cuff provides an effective low-pressure seal
- soft, thin-walled cuff ensures effective sealing and atraumatic intubation and extubation
- efficient one-way valve for cuff inflation and deflation
