PROFESSIONAL SKINFOLD CALIPERS: MECHANICAL AND DIGITAL

- 27320 PLICOMETRO - Professional skinfold caliper - mechanical
- 27346 PLICOMETRO - Professional skinfold caliper - digital with PC cable for data transfer USB

This high precision instrument measures the thickness of a fold of skin with its underlying layer of fat giving physicians the situation of the subcutaneous tissues of the patient.

Possibility of re-calibration
Produced to meet International Standards, the Gima “Skinfold caliper” has springs which exert a pressure of 10 g/mm² on the skinfold and an accurate scale which measures thickness in mm. With possibility of re-calibration of the pressure it solves the major problem of traditional skinfold caliper that is reduction of the tension of the spring in the time.

Easy to use and read
With double reading scale (27320) or digital display (27346), it is supplied with picture showing advised positions for measurements. Tables will help obtain correct % of body fat from measured data and make a correct evaluation of the patient.

Stylish and user-friendly
A special nylon finish makes the device feel skin, avoiding trouble of contact with metal. Made in metal and sold in an attractive wooden box (19x36xh 6 cm). Made in Italy, provided of medical device CE certification. User manual in GB, FR, IT (both models), ES, DE, (27320 only).

Data management on PC (only 27346)
For immediate data transfer on most programmes (Excel, Word, Open Office, ...). Requirements: Windows 2000, XP (Service Pack 2), 7, Vista. USB 2.0 minimum.

FAT-1 SKINFOLD CALIPER

- 27344 FAT-1 SKINFOLD CALIPER
  Economic but precise and accurate skinfold caliper for professional use, made in Italy. Measures the thickness of skin folds over the body, based on the characteristics developed by Tanner and Whitehouse:
  - pressure on the fold: approx 10 g/mm²
  - contact surface on the fold: approx 6x11 mm
  It allows a correct evaluation of the nutritional status and the sectoral distribution of adipose tissue. Raise a fold of skin with your fingers and measure its thickness by the forceps (max opening 4 cm): on the top edge a scale in millimeters and an arrow measure the skin fold (triceps, subscapular muscles, etc...) with an accuracy of about ±2 mm. The coloured bands placed near the scale allow a simultaneous comparison of the measured value with referential percentages related to men and women. This information is included in the manual provided with the unit and facilitate the interpretation of the values. Advised in dietetics, cardiology, sports medicine, aesthetic medicine, gynaecology, pediatrics, ecc...

  Ideal for dieticians, gymnasias and sports centres, it is perfect also for homecare. It helps manage nutrition, fitness and weight control and can indicate if you are at the right weight and also whether you are nutritionally healthy.
  Advanced technology in your hands.
  GIMA Body Fat Analyzer measures the flow of electrical signals (total body electrical resistance or impedance) as they pass through FAT, LEAN (muscle, bones, vital organs) or WATER.
  When the amount of fat, lean or water changes, so does the Body Fat signal, giving you a highly reliable and accurate measure of the amount of each of these components that make up your total weight. Specifically, 4 electrodes are placed over metacarpus and metatarsus where a 50 kHz current is introduced. The detected signal level will be an index of total body water and fat free mass.
  Only 2 minutes for an essential and easy test
  Testing and results take less than two minutes and have the same accuracy as other more expensive devices.
  A lot of meaningful data
  FAT: actual weight of fat on the body
  LEAN: actual weight of lean, mostly muscle and vital organs
  WATER: water content in the body
  % FAT: percentage of fat weight in total body weight
  % LEAN: percentage of lean weight in total body weight
  BMR: basal metabolic rate
  Target Weight: weight goal under optimal condition
  Target % Fat: normal percent for sex and age
  Portable, for performing test everywhere
